This unique cross-industry collaborative project brings together expertise from across the entire paper supply chain from the mill, through transport, storage, handling and printing. Its goal is to establish a common generic best practice tool as a global reference for suppliers, transporters, converters and printers to improve their efficiency.
“Optimised Paper Handling & Logistics”
best practice guide

Paper is handled 10-20 times from when it leaves the paper mill to when it is put on to the press. Every manipulation of rolls and pallets carries a risk of accidents and damage. Paper is a demanding cargo with a high economic unit value, requiring specialised and correctly maintained techniques, tools and facilities for handling, logistics, storage and preparation for printing.

This best practice guide is a tool dedicated to reduce the risks of accidents, economic and environmental degradation across the paper value chain. It is structured into 11 easy to use modules:

The heavily illustrated guide features an easy-to-read text to better understand how best practices are a tool to improve performance and trouble-shooting for everyone - whether they are supervisors, operating staff, suppliers or supply chain managers.

Download now your FREE e-book on www.ophal.info

The 270-page book would normally sell at a cover price of 250 € / $280. Thanks to the support of our project partners we are able to make it available as a FREE e-book. Participating organisations believe that price should not be a barrier to access best practices. Available 25 January 2017.
